Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:

The combination of limitation including logical broadcast domain generation and definition which is connected by a minimum of two routing devices implementing the same static route policy acting to govern the flow of traffic and moderate unauthorized information transfer between network services and network clients, where the minimum of two routing devices operate routing procedures effecting the same static route policy independently, was not fairly taught or suggested by the prior art of record. Interpretation of the claimed invention is made in light of the Response, received 7/29/2004, primarily based on the entirety of the arguments set forth on Page 9, including references to the instant specification. The detailed distinction from standard and widely implemented firewall technologies through the use of static routing tables in accordance with the definition provided in the instant specification and as argued by Applicant as (files, database(s)) containing entries which define criteria that is used to grant or deny access to a particular logical broadcast domain, in combination with all remaining claim limitations set forth in the independent claims, is not fairly taught or suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
